

Figure A 1.2-1 ESS Profile

Q400 PEC Environmental Stress Screen

ESS Times: Cycle 1 to 6: 780 minutes, 13 hours. Cycle 4 to 6: 376 minutes, 6 hours 16 minutes. Initial ramp down for cycle 4 is 6.33 minutes.

Times are approximate and dependent on the functional test time by the ATE. Ramp rates are at 12 degrees C per minute. Unit is powered to table 6.4-1 for all ramp ups.

The high level ambient vibration need not be performed immediately prior to the temperature cycle ESS.

Random Vibration: 40 minutes at 3.46 gn rms preceding the temperature cycle with no cable connected. Total of 40 minutes at 1.92 gn rms during the temperature cycles.
